

WHEEL CARE AND MAINTENANCE

A few simple habits keep every Sentali finish looking as it did on delivery day, and keep your warranty valid.

✓ DO

- Use only mild cleaners with a neutral pH, and clean water without chemical additives.
- Clean chrome, brushed and polished wheels with water only.
- Remove brake dust, dirt and road chemicals quickly and thoroughly.
- Rinse and dry the wheels thoroughly after every wash.
- Remove the centre cap if needed so no cleaner is left in hard-to-reach areas.

✗ DON'T

- Use caustic or aggressive cleaning agents. They can permanently damage the finish and the wheel.
- Leave brake dust, dirt or chemicals on the wheels.
- Leave cleaner sitting in the spokes, around the centre cap or on the barrel.

EVERY WASH

CLEANING ROUTINE

01

CHOOSE THE RIGHT CLEANER

Mild, pH-neutral cleaner and clean water for painted wheels. Water only for chrome, brushed and polished wheels.

02

REMOVE CONTAMINANTS

Wash off brake dust, dirt and road chemicals promptly, before they can damage the paint or the wheel itself.

03

RINSE THOROUGHLY

Rinse away all cleaner, including behind the spokes and around the centre cap. Remove the cap if necessary.

04

DRY THE WHEELS

Dry every surface after washing so no water or cleaner is left on the finish.

BY FINISH

WHAT TO CLEAN WITH

FINISH	CLEAN WITH
Painted, gloss and matte finishes	Mild pH-neutral cleaner and clean water
Machined, milled and diamond-cut finishes	Mild pH-neutral cleaner and clean water
Chrome	Water only
Brushed	Water only
Polished	Water only

KEEP YOUR WARRANTY VALID

Not following these instructions can damage the paint and the structure of the wheels, and voids the warranty.
